

# MONOCULAR 8x42

## user's manual

### 1. Connect to a hand strap or a tripod

The screw on the monocular can be attached to a hand strap.

You can also remove the screw with a wrench.

The monocular uses 1/4" standard tripod threads. It can connect to a tripod or other mounts with 1/4" threads.

### 2. Twist up eyecap

For eyeglass wearers, rotate down the rubber eyecap to get the best image.

With glasses

Without glasses

### 3. Focus

This is to adjust the distance. Rotate the focusing wheel clockwise to observe the close shot and rotate it counterclockwise to get the distant view. When doing this adjustment, try to find an object in the distance.

### 4. Lens caps

The cap helps to prevent the lens from dust, scratching or crushing. It also can be removed when you use the monocular.

### 5. Safety precautions

Never look at sun directly. Instantaneous and irreversible damage to your eyes will occur and may result in total loss of eyesight.

Do not use monocular while walking. It may result in a collision or a fall, and could cause injury.

Be careful that small children do not swallow caps, bag, and so on.

To clean the lens surface, wipe it gently with a lens cleaning cloth or use a lens cleaning tissue and a small amount of lens cleaning fluid available at camera stores.

Use a brush or a clean cloth to remove sands and dirt from the rotating parts on the body, focusing wheel and other parts.
